strength
IN NUMBERS
The mission of LUNGevity Foundation is to have a meaningful and immediate impact on improving lung cancer survival rates, to ensure a higher quality of life for lung cancer patients, and to provide a community for those impacted by lung cancer.

2011 has been a banner year for LUNGevity.

We fulfilled our promise of awarding $2 million in new research grants to nine groups of researchers who are doing cutting-edge work in our two core focus areas, early detection and targeted therapies. In addition, LUNGevity hosted the inaugural HOPE Summit in Washington, D.C. to allow lung cancer survivors to celebrate survivorship and to share their common experiences. We are also incredibly proud to continue supporting the largest grassroots lung cancer network in the country, giving us the ability to reach even more people who are touched by this horrible disease.

While LUNGevity is delighted by these successes, our work is not done. This year, more than 220,000* people will be diagnosed with lung cancer, and the majority of those diagnoses will be too late for effective treatment.

Working together, we can inspire others to continue the momentum of raising lung cancer awareness, change the landscape of lung cancer research and treatment, and reduce lung cancer mortality.

* National Cancer Institute, 2011
Dear Friends,

Three years ago I lost my mother to lung cancer. There was little the doctors could do to catch the disease early or to treat her after she was diagnosed. Like so many people, I was shocked to learn that even with so much cancer awareness and research funding in the country, lung cancer does not receive the attention it deserves. Following my mother’s death, my family decided to do something about this horrific disease. We ultimately joined forces with LUNGevity Foundation, making LUNGevity the nation’s largest lung cancer nonprofit.

This year, LUNGevity demonstrated the power of our approach to funding lung cancer research. We effectively invested millions of dollars into translational research projects.

In addition to funding lifesaving science, LUNGevity Foundation has continued to focus on the other component that is essential for sparking change — an active constituency.

Through grassroots events and a vibrant online community, LUNGevity aligns with the needs of hundreds of thousands of survivors, caregivers, and advocates. The number of event participants and online contributors grows every day — making our voice louder and more likely to effect changes in national policies and perceptions.

Through increased research funding and nationwide support, the public now has outstanding treatment and detection options for breast, colorectal and prostate cancers. We need to do the same for lung cancer.

As President and Chairman of LUNGevity, I am proud to be building a national movement that highlights the disparity in cancer funding and results in changes to the nation’s allocations for lung cancer research funding.

While LUNGevity draws the nation’s attention to the massive impact of lung cancer, we continue to rely on the loyalty and service of our incredible family of supporters to help lung cancer patients and their families get the support and treatment options they so desperately need.

As you will read in the following pages, the promise of LUNGevity Foundation lies in our philosophy, our practices, and most importantly, our people. Together, we will fund research, build a national movement to end lung cancer, and save lives.

Andrea Stern Ferris
President and Chairman
In 2000, people diagnosed with lung cancer had a bleak future. With little access to information or support, lung cancer patients felt alone. But seven people battling lung cancer vowed to give a voice to this silent disease. They created LUNGevity Foundation.

The founders immediately planned an event to raise money for lung cancer research. As was typical of the disease, only three of the founders were still alive later that year to attend LUNGevity’s first event and now six of the seven have succumbed to the disease.

“They were the pioneers,” says Jill Feldman, one of LUNGevity’s earliest volunteers and a long-time supporter. “They saw the lack of attention and funding that went to lung cancer and decided to roll up their sleeves.”

By 2009, Jill had been involved with LUNGevity for many years and she had seen several family members die from lung cancer. The combination of Jill’s regular cancer screenings along with progress in the early detection of lung cancer paid off. When Jill herself was diagnosed with lung cancer it was detected early enough for effective treatment.

Unfortunately, Jill’s story is rare but it is what the founders of LUNGevity had envisioned. By accelerating progress in lung cancer research, more people can fight lung cancer and win.

Today, LUNGevity has become one of the most recognized names in the lung cancer movement. Our success stems directly from the dedicated supporters who are willing to share their time and energy to raise awareness and fund translational research.

Armed with a solid platform, experienced leadership, and a legion of active volunteers, LUNGevity brings hope to the multitudes of people who are affected by lung cancer each year.

“I am amazed and proud of the growth of LUNGevity. We have grown by leaps and bounds thanks to the dedication of all who are involved with us.”

PATTI HELFAND, the only surviving founder of LUNGevity

Approximately 160,000 people will die of lung cancer this year.*

BRINGING HOPE In 2000, people diagnosed with lung cancer had a bleak future. With little access to information or support, lung cancer patients felt alone. But seven people battling lung cancer vowed to give a voice to this silent disease. They created LUNGevity Foundation.

The founders immediately planned an event to raise money for lung cancer research. As was typical of the disease, only three of the founders were still alive later that year to attend LUNGevity’s first event and now six of the seven have succumbed to the disease.

“They were the pioneers,” says Jill Feldman, one of LUNGevity’s earliest volunteers and a long-time supporter. “They saw the lack of attention and funding that went to lung cancer and decided to roll up their sleeves.”

By 2009, Jill had been involved with LUNGevity for many years and she had seen several family members die from lung cancer. The combination of Jill’s regular cancer screenings along with progress in the early detection of lung cancer paid off. When Jill herself was diagnosed with lung cancer it was detected early enough for effective treatment.

Unfortunately, Jill’s story is rare but it is what the founders of LUNGevity had envisioned. By accelerating progress in lung cancer research, more people can fight lung cancer and win.

Today, LUNGevity has become one of the most recognized names in the lung cancer movement. Our success stems directly from the dedicated supporters who are willing to share their time and energy to raise awareness and fund translational research.

Armed with a solid platform, experienced leadership, and a legion of active volunteers, LUNGevity brings hope to the multitudes of people who are affected by lung cancer each year.

“National Cancer Institute, 2011

* National Cancer Institute, 2011
CELEBRATING OUR VOLUNTEERS  When Heather Saler, a young mother who had never smoked, was diagnosed with late-stage lung cancer in 2003, she wanted to help fund lung cancer research. Heather decided to host an event to benefit LUNGevity Foundation. Her event, the South Jersey walk, became our first grassroots event.

Today, over 45 volunteer coordinators recruit their friends, family, and colleagues to help create events to benefit LUNGevity. Their enthusiasm, dedication, and networking skills are the cornerstone of LUNGevity’s success and growth.

LUNGevity is proud to support the largest number of grassroots events supporting lung cancer research in the country. From walkers in California to golfers in Illinois, the thousands of event participants raise critical funds for lifesaving research.

These widely-attended events are also essential to empowering people who are affected by the disease. Instead of feeling victimized by lung cancer, lung cancer patients and their loved ones join a community and help create a national movement to end lung cancer.

“The best part about being a coordinator is discovering all the people that are willing to volunteer and help you out!”

MICHELE BOWLES, volunteer coordinator of the 8th Annual Lung Cancer Walk & Rally in Naperville, Illinois.

“As the Foundation grows and expands their reach, they equip their volunteer event coordinators with the tools we need to help the Foundation become even more successful.”

AISHA AVERY, volunteer coordinator of the 5K fun run and walk, Breathe. Walk. Live. Atlanta!!!

“I came to LUNGevity because I was looking for an organization dedicated to finding a cure for lung cancer...we are going to fund more research, create more hope, improve and save more lives.”

JERRY SORKIN, LUNGevity board member and volunteer coordinator of the 5K walk, Breathe Deep D.C.

$1,683,635 was raised by our grassroots events in 2011, thanks to our volunteer coordinators.
LUNG CANCER SUPPORT COMMUNITY  
LUNGevity is proud to help lung cancer patients, advocates, and caregivers ease their burdens by hosting a community of active lung cancer supporters. Our Lung Cancer Support Community offers online advice, support, phone buddies through LUNGevity LifeLine, and information every day of the year.

With more than 7,500 active members and counting, this section of our website continues to be one of the best resources available to lung cancer patients and their families. This year, we have enhanced our website with even more free web-based services.

Those who are interested in educating others or becoming a lung cancer advocate can join the new LUNGevity Link Up and receive free training, educational materials, and support to begin raising lung cancer awareness.

Because many patients are overwhelmed by confusing medical jargon, LUNGevity provides podcasts, webinars, interactive Q&A sessions, and a popular Ask the Experts advice section where patients can have their individual questions answered by medical experts.

In addition, LUNGevity is creating new ways to support and empower lung cancer survivors. This year’s inaugural HOPE Summit brought lung cancer survivors of all ages to the nation’s capital to share stories and bring hope to others fighting this disease.

The Lung Cancer Support Community gives patients and their families a place to go for information, advice or even a sympathetic ear any time of the day or night. The Community fosters hope in people who need it most and energizes LUNGevity’s powerful grassroots network. We are committed to continuing to support and engage our constituency of patients, caregivers, and advocates as a critical part of the organization’s mission and strategic vision.

"It was a very diverse group of people and we all had one thing in common — lung cancer. Through the Hope Summit I have made lifelong friends and I do not feel alone anymore."

HEATHER GERAGHTY, age 25, the youngest HOPE Summit participant

With over 395,000 posts, the online Lung Cancer Support Community continues to be a bastion of support and information.
In 2011, more than 10,000 individuals blanketed the country by participating in our grassroots network of events to benefit LUNGevity and the lung cancer community.

KEY
- LUNGevity Office Locations
  - Chicago, IL (headquarters)

  Arlington, TX

* benefactor event
Dear Friends,

Since its inception, LUNGevity Foundation has been driven by a commitment to fund cutting-edge lung cancer research. Over the past decade, LUNGevity has invested in lung cancer research grants that demonstrate the power of science in advancing the care and treatment of lung cancer patients. This year, LUNGevity is proud to fund over $2 million in new lung cancer research grants to 20 scientists at 10 institutions across the country. Thanks to LUNGevity and other funding sources, we are improving our understanding of the disease and are poised to make major breakthroughs in the early detection and treatment of lung cancer.

This commitment to fund lung cancer research sparks hope for the future outcomes of lung cancer patients and underscores the importance of carefully directing funds to propel the next generation of translational research. LUNGevity’s cross-disciplinary Scientific Advisory Board, comprising world-class lung cancer researchers, determines and reviews LUNGevity’s strategy to fund only the most promising lung cancer research. These Board members are strategic partners who guide the organization and help LUNGevity reach patients and caregivers. By working cooperatively with the Scientific Advisory Board, LUNGevity ensures that we are quickly moving toward a reliable method for the early detection of lung cancer and better treatment options with targeted therapies.

With the Foundation’s expanding grassroots reach, we are bringing the nation’s attention to the need for more lung cancer research. By raising awareness across the country, LUNGevity will improve the funding landscape for all researchers working toward early detection and treatment options for lung cancer.

I am honored to serve as the Chairman of LUNGevity’s Scientific Advisory Board. Carefully vetting and identifying research that is most likely to save lives, is an important task that we take seriously. I am confident that by wielding the mindshare of the respected researchers of the Scientific Advisory Board to shape LUNGevity’s scientific strategy, patients will soon experience significant improvements in the detection and treatment of lung cancer. After all, wise investments in research today will save lives tomorrow.

Sincerely,

Pierre P. Massion, MD
Chairman, Scientific Advisory Board
LUNGevity Foundation
With $2,000,000 of new research funded this year, LUNGevity is helping to advance the science of lung cancer detection and treatment like never before in history.

**The Gold Standard Approach to Funding Research Responsibly**

LUNGevity has taken big steps to ensure that the science we fund will translate directly to reducing lung cancer mortalities through early detection and targeted therapies. Our 2011 award process funded two areas of highly innovative and impactful research:

- Finding effective biomarkers that can be used to develop a non-invasive strategy, including imaging technology, for detecting early stage lung cancer.
- Creating more effective and efficient targeted therapies to treat lung cancer at all stages of the disease and helping to bring these drugs to patients quickly.

LUNGevity issued one Request for Applications (RFA) in the field of early detection and one RFA focusing on targeted therapeutic agents that are effective at all stages of the disease.

LUNGevity’s strategy for reviewing research grant applications is based on the gold standard review process used by the National Institutes of Health. Applications for the Foundation’s grants are peer reviewed by world-renowned researchers who evaluate them for their scientific merit and impact on the field of lung cancer.

In addition, LUNGevity’s Scientific Advisory Board is fully committed to helping LUNGevity win the fight against lung cancer. They meet twice each year to discuss research strategy, share new scientific developments, and oversee awarded grant projects.

With this expert-guided approach to funding lung cancer research, LUNGevity is confident that every donation is put toward research that will save lives.
More than 220,000 people were diagnosed with lung cancer this year.* Most of these people found the cancer too late for effective treatment.

**HOPE SPRINGS FROM HARBINGER OF DISEASE** Many high-risk individuals may already have lung cancer but they will not discover the tumors and begin treatment for many more years. Even if their doctors are lucky enough to detect a growth on a CT scan, they may still have to undergo a dangerous and expensive biopsy surgery to determine if the tumor is malignant or benign. Their situation underscores the importance of LUNGevity’s $400,000 grant, awarded in 2010 to a team of top-notch researchers led by Steve Dubinett, Chief of Pulmonary and Critical Care Medicine at UCLA, and Kostyantyn Krysan, Assistant Professor at the David Geffen School of Medicine at UCLA.

Over the past decade, this team has been studying the microenvironments surrounding lung cancer tumors. Their findings show that while early tumors are often asymptomatic and too small to be detected on imaging scans, they do alter the proteins and microRNA of the patient’s blood in order to encourage tumor development.

As pioneers in their field, these researchers have been investigating the use of these proteins and microRNAs from the blood plasma as biomarkers for early stage lung cancer. Over time, this unique approach has come to be supported by a wealth of data from other laboratories as well. The team’s preliminary studies have led them to develop a biomarker panel that accurately distinguishes smokers with and without lung cancer, and they predict the plasma test will have 97% sensitivity.

If the project is successful, this work could create a blood-plasma test to help clarify the results of CT scans, and the test may even be used to begin screening patients at elevated risk for lung cancer. LUNGevity Foundation is proud to be supporting such innovative research, and we are hopeful for the early detection tests and treatment options that are on the horizon.

* National Cancer Institute, 2011
ONE TEAM, THREE WORLD-CLASS SCIENTIFIC APPROACHES  Far too many lung cancer patients are diagnosed after the disease has progressed to a point where there are not many treatment options remaining. In order to catch the disease earlier, we need a simple and accurate non-invasive test, such as a blood test, to detect lung cancer.

Scientists at the Fred Hutchinson Cancer Research Center are closer than ever to developing such a test. Building upon work that has already identified several biomarkers that could be used to test a patient’s blood for lung cancer, this team of researchers is now utilizing a $600,000 grant from LUNGevity, awarded in 2010, to continue their quest to develop blood tests for the early detection of lung cancer.

This multi-disciplinary team’s collaborative approach increases their chances of success. Dr. Samir Hanash, a molecular diagnostics authority, is spearheading the team’s efforts and developing a blood test to distinguish between benign and malignant lesions identified by CT scans. Dr. Christopher Li, an expert in cancer epidemiology and prevention, is overseeing the studies to generate a blood test to identify never-smokers who are at increased risk of lung cancer. Dr. Gary Goodman, a highly respected scientist specializing in thoracic oncology, is leading the team’s effort to create a blood test that can detect lung cancer before the onset of symptoms.

LUNGevity is proud to be investing in this exciting work and is eager to see the results. If even one of these blood tests becomes a reality, it will completely revolutionize the detection and treatment options for lung cancer patients around the world. And most importantly, lives will be saved.

“Our team is working hard to reduce lung cancer mortality and this grant will help us do it!”

DR. SAMIR HANASH, Program Head, Molecular Diagnostics, Fred Hutchinson Cancer Research Center

A $600,000 grant from LUNGevity, awarded in 2010, continues the quest to develop blood tests for the early detection of lung cancer.
**RESEARCH GRANTS**

LUNGevity Foundation is committed to making substantial grants to the most promising lung cancer translational research in the areas of early detection and targeted therapies. We are proud to present the outstanding projects that received 2011 and 2010 awards.

**2011 AWARDS**

The amounts below reflect funding for the first year of two-year grants.

**EARLY DETECTION RESEARCH PROJECTS**

**LUNGevity Foundation Research Grant**

**Grant:** $100,000  
**Award Period:** July 1, 2011 – June 30, 2012  
**Recipient:** Jeffrey A. Borgia, Ph.D., Assistant Professor, Rush University Medical Center, Chicago, IL  
**Study:** “Autoantibody-based biomarkers to aid in the early diagnosis of lung cancer”

**LUNGevity Foundation Research Grant**

**Grant:** $300,000  
**Award Period:** July 1, 2011 – June 30, 2012  
**Recipient:** Edward Patz, M.D., James and Alice Chen Professor of Radiology, Duke University Medical Center, Durham, NC  
**Study:** “Serum Biomarkers for the Early Detection of Lung Cancer”

**TARGETED THERAPIES RESEARCH PROJECTS**

**LUNGevity Foundation Research Grant**

**Grant:** $300,000  
**Award Period:** July 1, 2011 – June 30, 2012  
**Recipient:** David P. Carbone, M.D., Ph.D., Program Leader, Thoracic/Head and Neck Program, Vanderbilt University Medical Center, Nashville, TN  
**Study:** “Biomarkers for personalizing adjuvant therapy in NSCLC – increasing cures”

**LUNGevity Foundation Research Grant**

**Grant:** $100,000  
**Award Period:** July 1, 2011 – June 30, 2012  
**Recipient:** Edward Gabrielson, M.D., Professor, Johns Hopkins University School of Medicine, Baltimore, MD  
**Study:** “Examining LKB1 status as a biomarker for response of lung cancer to metform”

**LUNGevity Foundation Research Grant**

**Grant:** $300,000  
**Award Period:** July 1, 2011 – June 30, 2012  
**Recipient:** Samir Hanash, M.D., PhD., Associate Professor, Department of Thoracic/Head and Neck Medical Oncology, University of Texas M.D. Anderson Cancer Center, Houston, TX  
**Study:** “Predictive blood-based markers of response to VEGF inhibitors in NSCLC”

**LUNGEvity Foundation Research Grant**

**Grant:** $100,000  
**Award Period:** July 1, 2011 – June 30, 2012  
**Recipient:** Alexander Steven Whitehead, D.Phil., Professor of Pharmacology, University of Pennsylvania, Philadelphia, PA  
**Study:** “Folate-related biomarkers as predictors of response to pemetrexed therapy”

**2010 AWARDS**

**Protect Your Lungs/ LUNGevity Foundation Research Grant**

**Grant:** $400,000  
**Award Period:** July 1, 2010 – June 30, 2012  
**Recipient:** Steven M. Dubinett, MD, Chief, Pulmonary and Critical Care Medicine; Professor of Medicine and Pathology; Director, UCLA Lung Cancer Research Program; and Kostyantyn Krysan, Assistant Professor, David Geffen School of Medicine at UCLA  
**Study:** “Combined Protein and miRNA Profiles for the Early Detection of Lung Cancer”  
This grant was funded in part by A Breath of Hope Foundation

**Protect Your Lungs/ LUNGevity Foundation Research Grant**

**Grant:** $600,000  
**Award Period:** July 1, 2010 – June 30, 2012  
**Recipient:** Samir Hanash, M.D., PhD., Program Head, Molecular Diagnostics; Gary Goodman, M.D., Senior Investigator; Christopher Li, M.D., Ph.D., Research Associate Professor, Epidemiology, Fred Hutchinson Cancer Research Center  
**Study:** “Blood Tests for the Early Detection of Lung Cancer”  
This grant was funded in part by A Breath of Hope Foundation
DONORS* The generous support from our friends allows LUNGevity to fund cutting-edge translational research and to offer information, support and most importantly, hope to lung cancer survivors and their families. Thank you!

By hosting an event to benefit LUNGevity, you can bring hope to the hundreds of thousands of people affected by lung cancer.

Don’t worry; it’s easy—and we’ll even help you do it!
LUNGevity is proud to be working with a prestigious team of scientists and researchers. These leaders in the fields of proteomics, imaging, biostatistics, immunotherapy and others are instrumental in improving the mortality rates of lung cancer patients. The broad range of experts on the Scientific Advisory Board guide LUNGevity on funding a variety of early detection techniques from tissue-based (blood, saliva, sputum) tests to imaging techniques and targeted therapies in order to develop the most promising protocol to reduce lung cancer deaths.

**Denise R. Aberle, MD**
David Geffen School of Medicine at UCLA-Radiological Sciences
Professor of Radiology and Bioengineering
Vice Chair, Research

**Nasser Altorki, MB, BCh**
NewYork-Presbyterian/Weill Cornell Medical Center
Chief, Thoracic Surgery
